Information Architecture

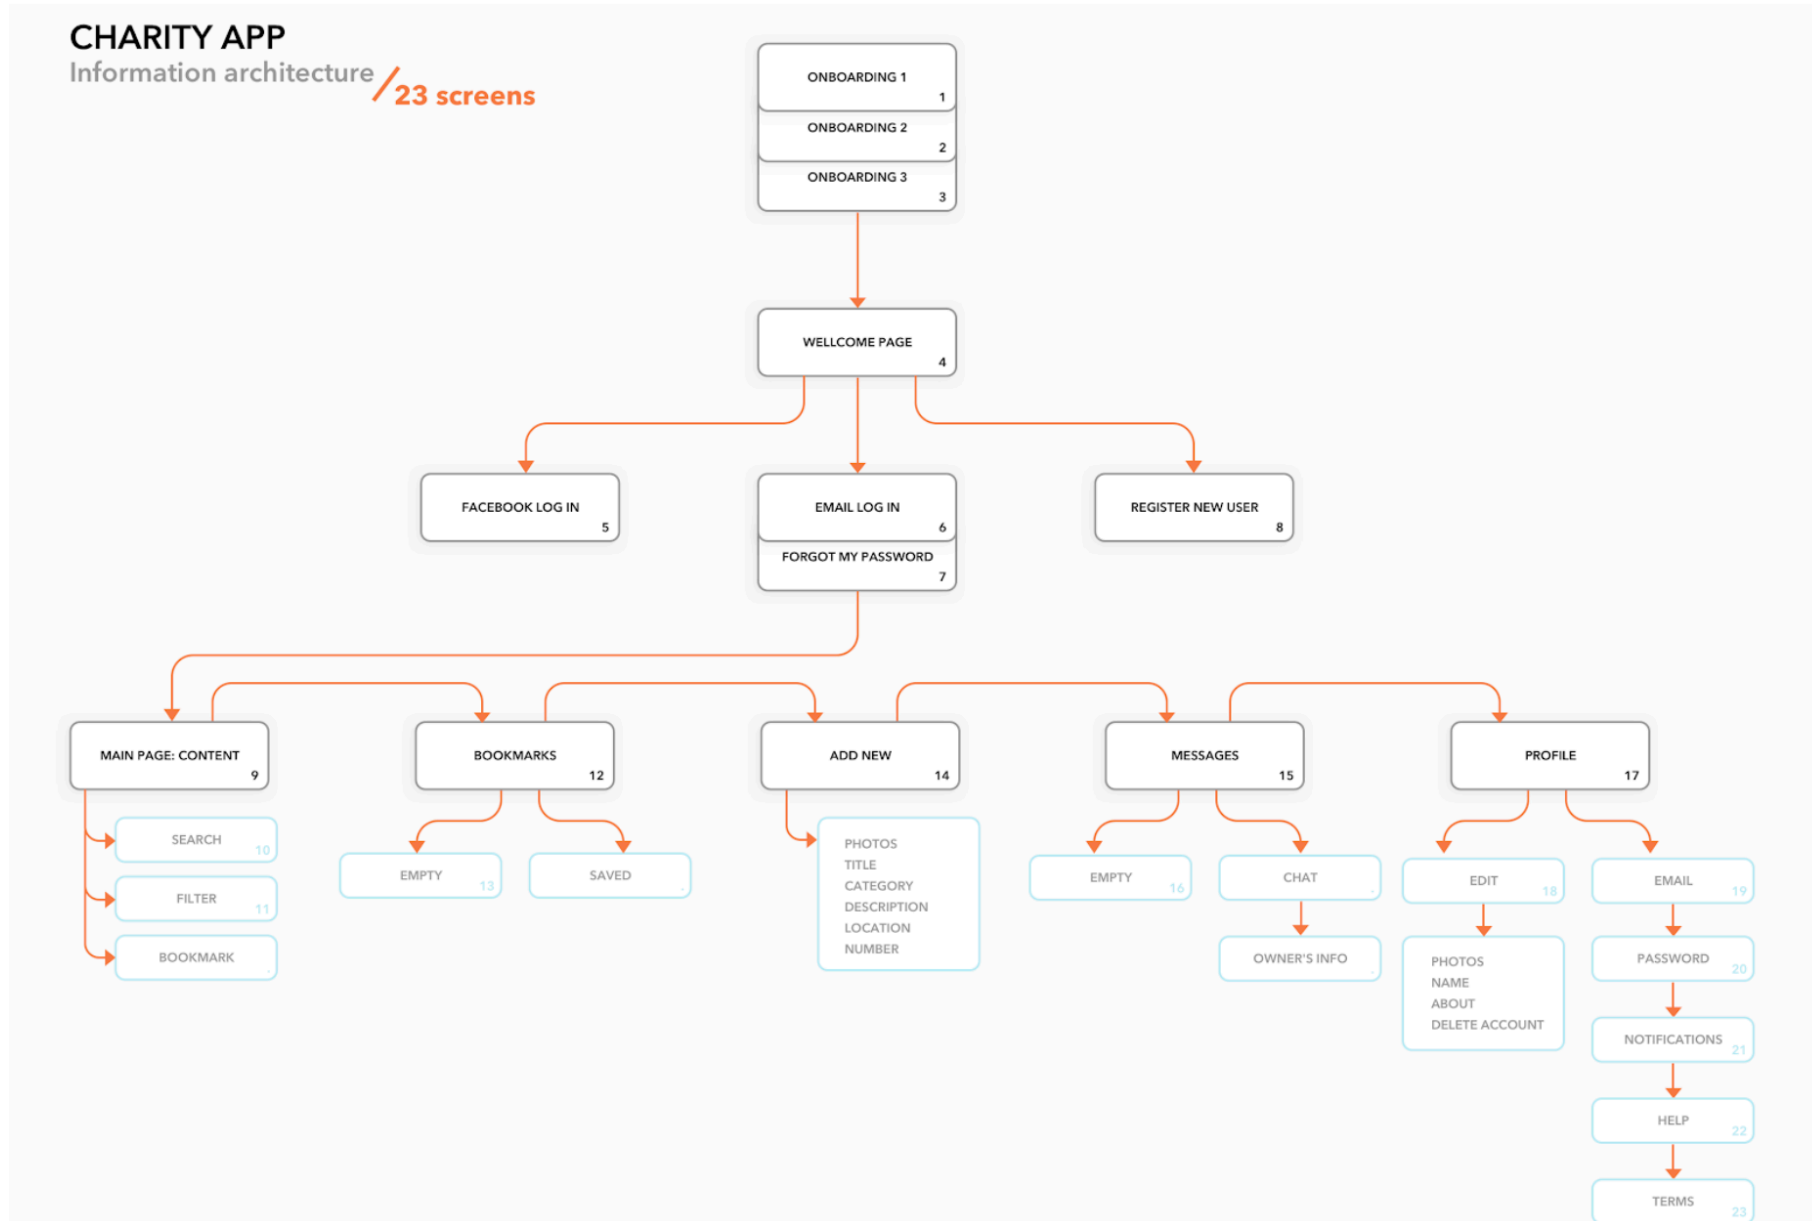

Structuring the Information for the
easy and efficient access of the same
by the targeted user

Information Architecture (IA)

Information Architecture (IA) is the art of organising and labelling an information space for optimal understanding and use.

- Structure or categories for organising your content and functionality.
- Different ways that people can navigate through the experience of your solution/product.
- Intuitive workflows or multiple processes for getting task done.
- Labels and language for communicating about the content.
- Searching, Browsing, Filtering tools to help them find what they are looking for.
