IA Approach

- What is the User Goals/tasks?
- What Information and Tools do you need to show to the users?
- Based on their expectations and immediate situation, when do you show them?
- How are the information and the tools categorised and ordered?
- What do users need to do with them?
- How many ways can you present those things and tasks? You might need more than one.
- How can you make it usable from their point of view.

IA, also includes designing workflows and tasks, the documentation related to this is recorded under User Stories and Task Flow Diagram

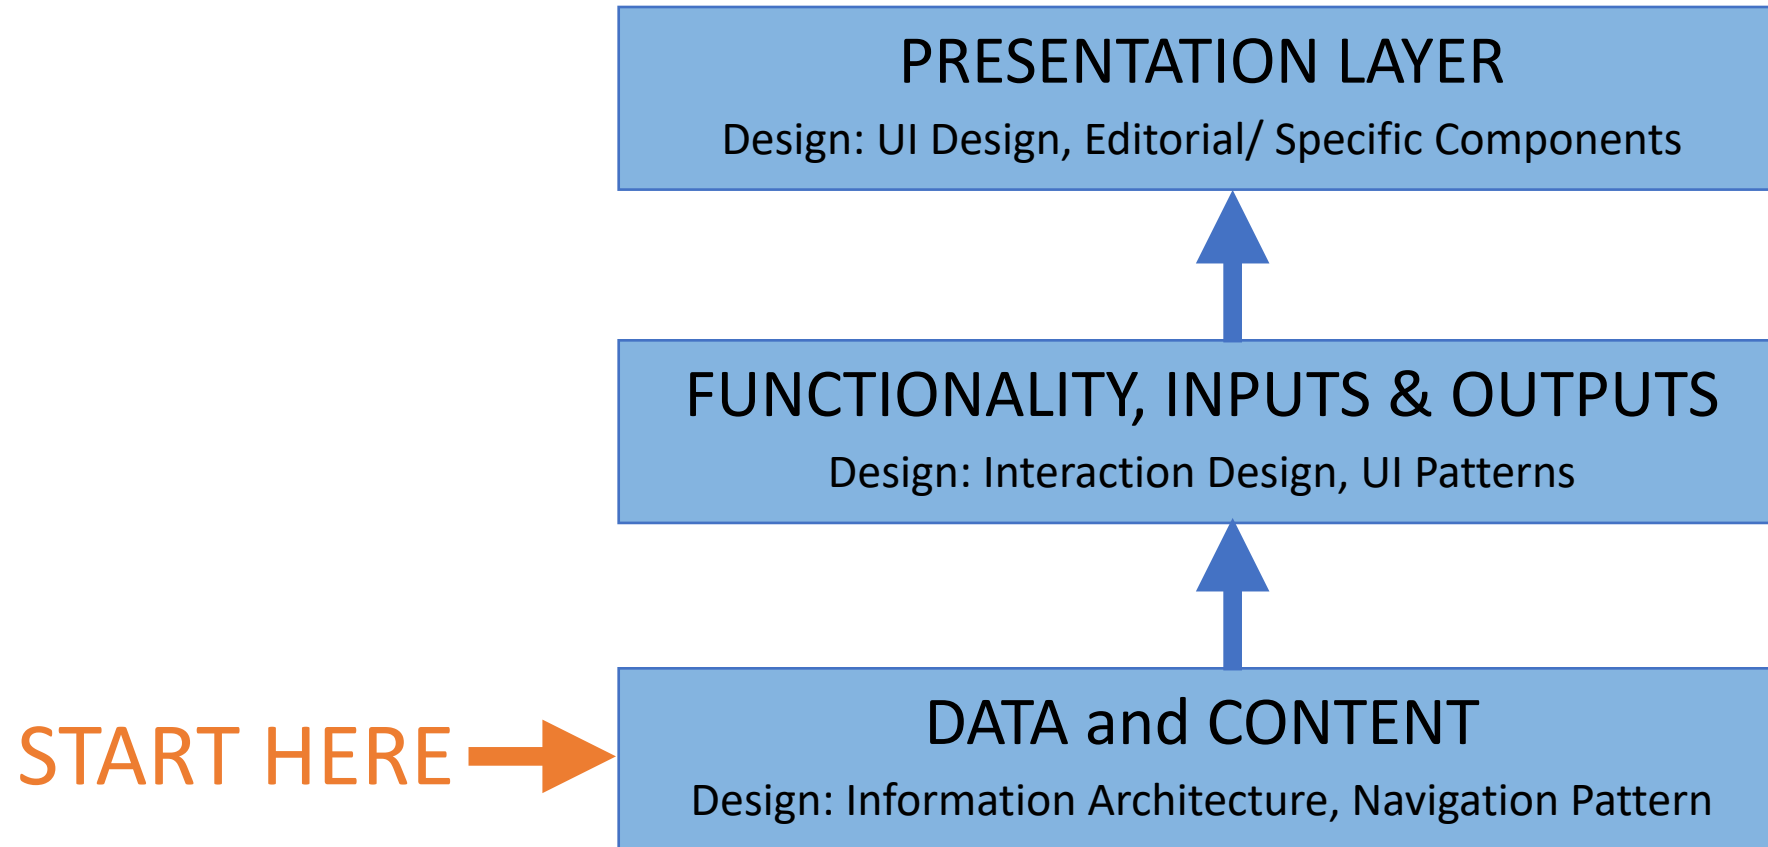

IA Approach

Designing Information Architecture starts with determining the main user goals, helping us figure out our top level pages. We'll start with the homepage/Home Screen, then link out to all the other main pages. To figure out what those main pages are, work out **what the main actions you want users to perform** are.

For Example: For a food delivery app, users typically want to:

- 1.Show Deals** (Offers, Discounts, Attraction etc)
- 2.Browse Restaurants & Dishes** (Discover food options)
- 3.Search & Filter** (Find specific restaurants or cuisines)
- 4.View Restaurant & Menu Details** (Read about food options)
- 5.Add Items to Cart & Customize Orders** (Select food and add instructions)
- 6.Place an Order & Make Payment** (Checkout securely)
- 7.Track Order Status & Delivery** (Real-time tracking updates)
- 8.Manage Orders & Reorder** (View past orders, reorder easily)
- 9.View & Leave Reviews** (Check ratings and feedback)
- 10.Access Account & Support** (Manage profile, payment methods, contact support)
- 11.Raise Issue** (Report Issue/problem)

IA Approach - Separate Information from Presentation

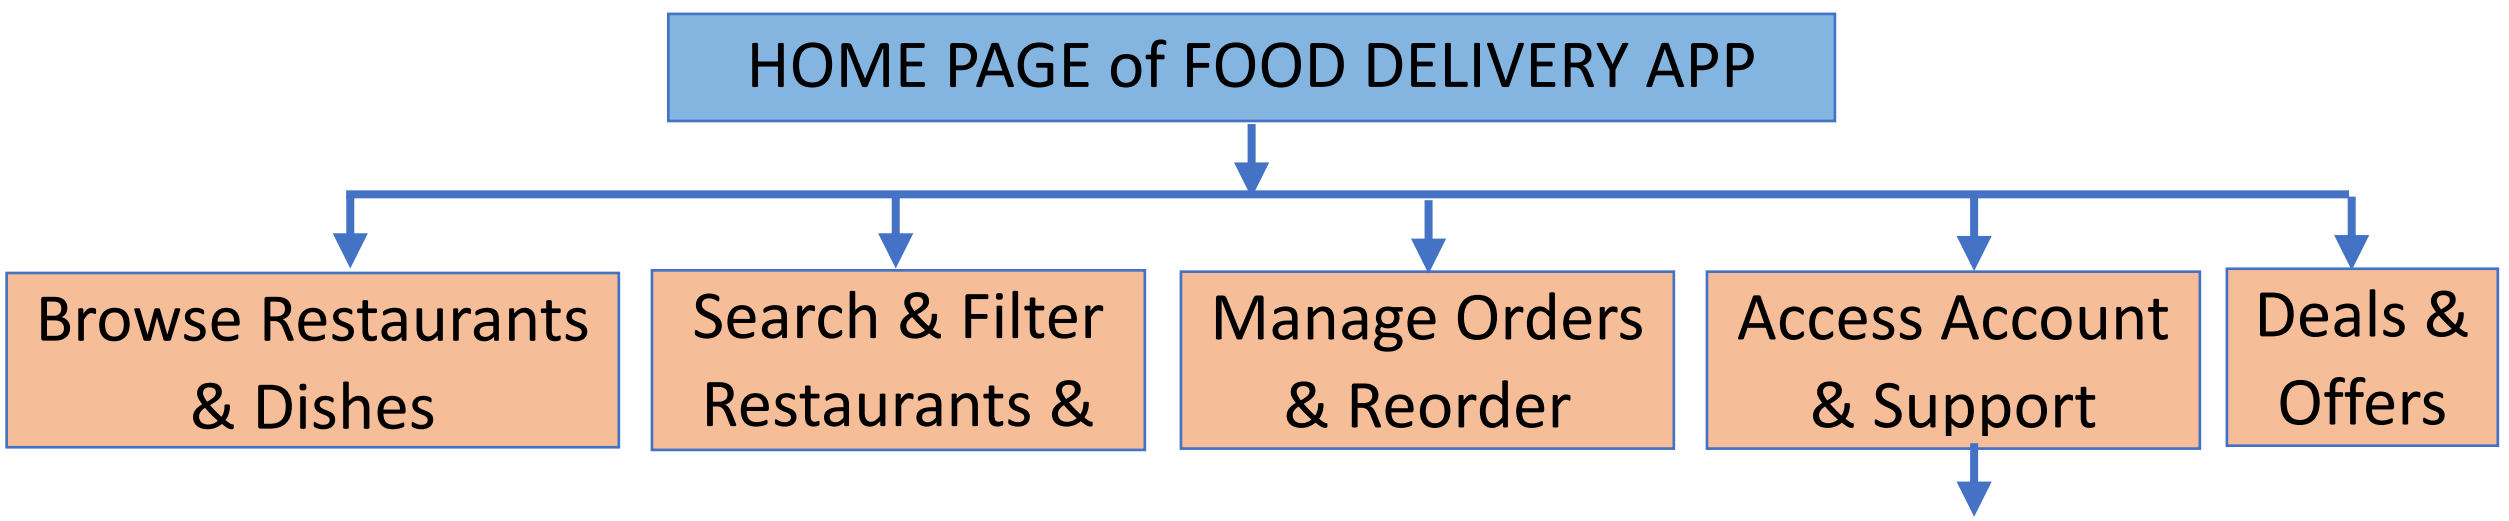

IA Approach - All Goals Vs Main Goals

1. **Show Deals** (Offers, Discounts, Attraction etc)
2. **Browse Restaurants & Dishes** (Discover food options)
3. **Search & Filter** (Find specific restaurants or cuisines)
4. **View Restaurant & Menu Details** (Read about food options)
5. **Add Items to Cart & Customize Orders** (Select food and add instructions)
6. **Place an Order & Make Payment** (Checkout securely)
7. **Track Order Status & Delivery** (Real-time tracking updates)
8. **Manage Orders & Reorder** (View past orders, reorder easily)
9. **View & Leave Reviews** (Check ratings and feedback)
10. **Access Account & Support** (Manage profile, payment methods, contact support)
11. **Raise Issue** (Report Issue/problem)

Differentiate between “All Goals” and “Main Goals”

HOME PAGE of FOOD DELIVERY APP

```
graph TD; A[HOME PAGE of FOOD DELIVERY APP] --> B[Browse Restaurants & Dishes]; A --> C[Search & Filter Restaurants &]; A --> D[Manage Orders & Reorder]; A --> E[Access Account & Support]; A --> F[Deals & Offers]; E --> G[ ];
```

The diagram is a hierarchical flowchart. At the top is a blue rectangular box containing the text 'HOME PAGE of FOOD DELIVERY APP'. A horizontal line extends from the bottom of this box, with five downward-pointing arrows branching off it. These arrows point to five orange rectangular boxes arranged horizontally below. From left to right, the boxes contain the following text: 'Browse Restaurants & Dishes', 'Search & Filter Restaurants &', 'Manage Orders & Reorder', 'Access Account & Support', and 'Deals & Offers'. A sixth downward-pointing arrow branches off from the bottom of the 'Access Account & Support' box, pointing to a short vertical line segment.

IA Approach

Group Content

Once we have the main pages in our hierarchy we can start grouping content within those pages. Think about what you want users to do on each page, just like you organise objects in your house based on how likely you are to use those things for main tasks in each room.

Sort by Usefulness and User Flow

The next important part of Information Architecture is determining the usefulness of each page and piece of content. We want to make sure that the content that users see is relevant to the page they're on

IA Approach - Group Content

- 1.Show Deals** (Offers, Discounts, Attraction etc)
- 2.Browse Restaurants & Dishes** (Discover food options)
- 3.Search & Filter** (Find specific restaurants or cuisines)
- 4.View Restaurant & Menu Details** (Read about food options)
- 5.Add Items to Cart & Customize Orders** (Select food and add instructions)
- 6.Place an Order & Make Payment** (Checkout securely)
- 7.Track Order Status & Delivery** (Real-time tracking updates)
- 8.Manage Orders & Reorder** (View past orders, reorder easily)
- 9.View & Leave Reviews** (Check ratings and feedback)
- 10.Access Account & Support** (Manage profile, payment methods, contact support)
- 11.Raise Issue** (Report Issue/problem)

HOME PAGE of FOOD DELIVERY APP

```
graph TD; A[HOME PAGE of FOOD DELIVERY APP] --> B[Browse Restaurants & Dishes]; A --> C[Search & Filter Restaurants &]; A --> D[Manage Orders & Reorder]; A --> E[Access Account & Support]; A --> F[Deals & Offers]; C --> G[View Restaurant & Menu Details]; G --> H[Reviews]; G --> I[Add to Cart]; H --> I; E --> J[Raise Issues]; J --> K[Email]; J --> L[Talk];
```

The diagram is a flowchart illustrating the navigation structure of a food delivery app's home page. It is organized into three horizontal sections separated by dashed lines. The top section contains five main navigation options: 'Browse Restaurants & Dishes', 'Search & Filter Restaurants &', 'Manage Orders & Reorder', 'Access Account & Support', and 'Deals & Offers'. The middle section shows two sub-navigation paths: 'View Restaurant & Menu Details' (linked from 'Search & Filter Restaurants &') and 'Raise Issues' (linked from 'Access Account & Support'). The bottom section details further actions: 'Reviews' and 'Add to Cart' are linked from 'View Restaurant & Menu Details', with a bidirectional arrow between them; 'Email' and 'Talk' are linked from 'Raise Issues'.
