Use cases and User Stories ...

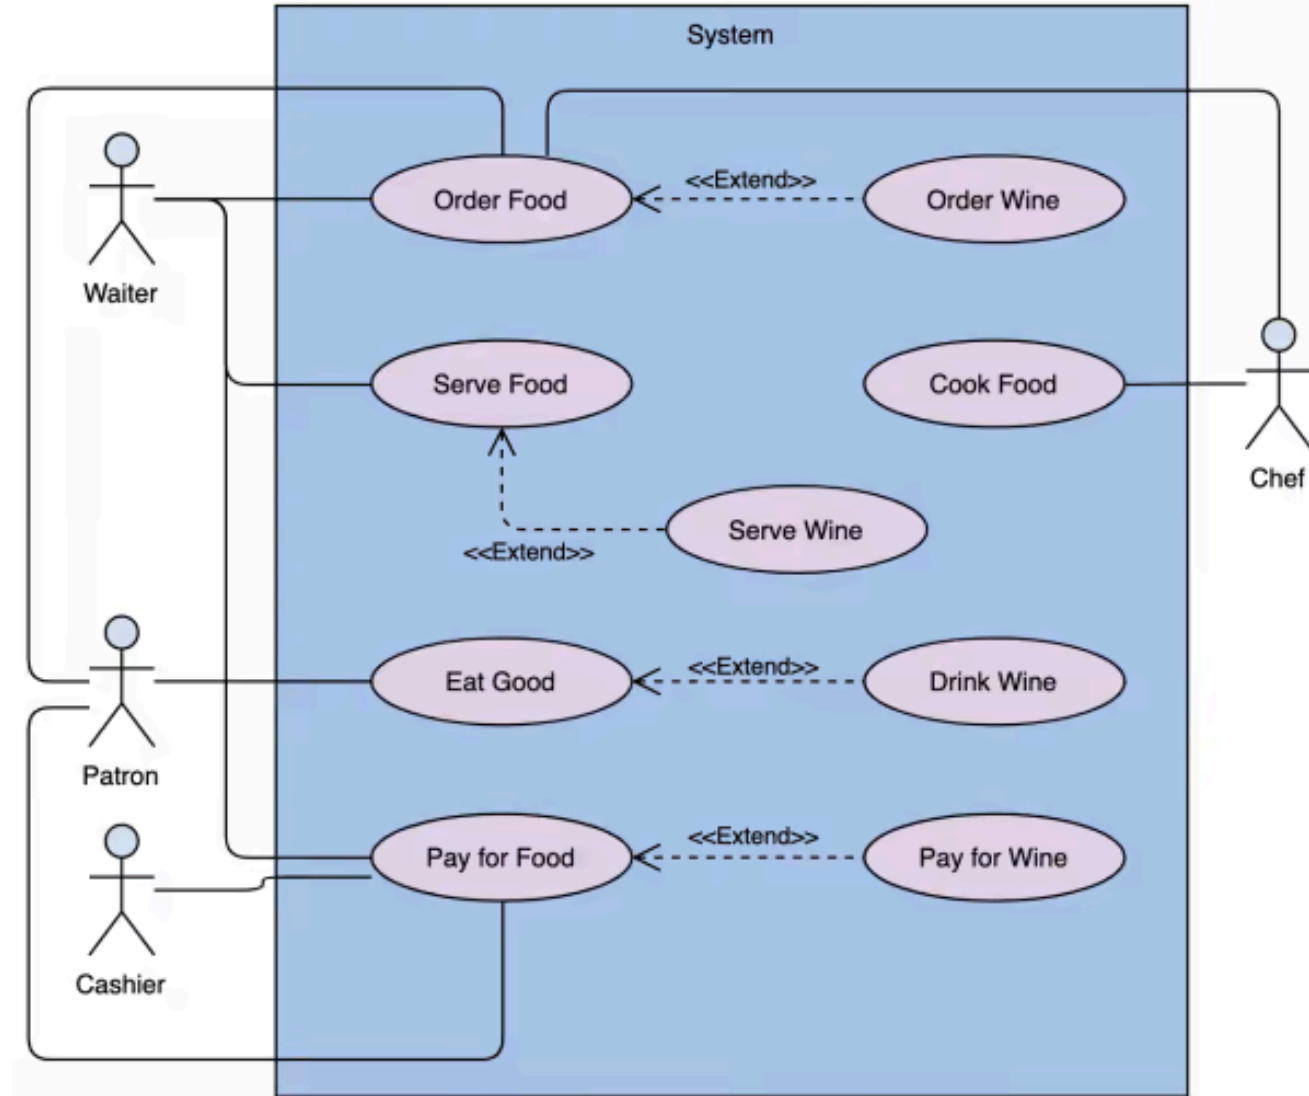

Use Cases

- A use case is *a written description of how users will perform tasks on your system*.
- It describes *functional requirements* of a system from a user's point of view, creating a goal-focused sequence of events that is easy for users and developers to follow.
- The use case is made up of a *set of possible sequences of interactions* between systems and users in a particular environment and related to a particular goal.

Use Cases

Every use case contains three essential elements:

- **The actor.** The system user -- this can be a single person or a group of people interacting with the process.
- **The goal.** The final successful outcome that completes the process.
- **The system.** The process and steps taken to reach the end goal, including the necessary functional requirements and their anticipated behaviours.

Lets try creating a use case...

- **The actor (Primary and Secondary):**
- **The goal:**
- **The system:**

JBTD explained to Describe Use Case

- Amit (End User- Actor 1) is already at home and hungry, don't want to cook, don't want to go out for eating as he wants to relax at home and maintain his diet (End User's Goal). This also confirms that he has no housemaid or someone who can cook for him at home.
- He needs cooked food which is healthy (Chef-Actor 2, his goal - cook healthy food quickly) and delivered to his home quickly (Delivery Boy - Actor 3 - his goal - deliver cooked food quickly).
- He (Actor 1) needs (A system) to achieve his End Goal.
- The system consists of a service provider (Actor 4 - Food delivery service), some product, process, steps including the necessary functional requirements (food search and ordering, paying (End User - Actor 1), Notifying the Restaurant - Chef Actor 2), assigning a Delivery Person (Delivery Boy - Actor 3) and their anticipated behaviours.

User Story

- A ***user story*** is a short, informal description of how a potential ***user might interact with a feature*** and it is usually told from the ***user's point of view***.
- A user story is usually written in a non-technical language and ***describes the value*** the feature or the product add to the ***user in meeting their goals***.
- The user stories are critical in ***agile software development process*** as it allows to keep design and development of the ***feature focussed on user of the feature***.
- *Example 1: As a database administrator, I want to automatically merge datasets from different sources so that I can more easily create reports for my internal customers.*
- *Example 2: As a user of WhatsApp, I want what's app to provide facility to translate the message I receive in German Script to English and also translate the message I write in English to German. It will allow me having better conversation with him.*

User Story - Food Delivery

Format of a User Story:

"As a [user role], I want to [goal] so that [reason]."

Example User Stories (Food Delivery App):

1. Ordering Food:

"As a customer, I want to browse restaurants so that I can find and order my favorite meals."

2, Making Payment:

"As a customer, I want to pay securely online so that I don't have to use cash."

3, Tracking Order:

"As a customer, I want to track my order in real-time so that I know when to expect my food."

4, Delivery Driver Notification:

"As a delivery driver, I want to get notified when an order is ready so that I can pick it up on time."

User Stories Vs. Use Cases

User stories

- Short descriptions
- Requirement's who and why
- General guidance
- No technical detail

Use cases

- Short or lengthy descriptions
- User flow or interaction
- In-depth guidance
- Detailed to write

User Journey Map

User Journey Map (UJM)

A **User Journey Map** is a visualisation of the user's experience as they interact with a product, service, or system. It captures the user's emotions, thoughts, goals, and touch points at each stage of their journey to help identify pain points and opportunities for improvement. The main components of UJM include:

- **Persona:** A representation of the target user, including their goals and motivations.
- **Stages:** The steps the user goes through to achieve their goal (e.g., Awareness, Consideration, Purchase, Use, Retention).
- **Touch points:** The specific interactions between the user and the product/service at each stage.
- **Emotions:** How the user feels at each stage (e.g., frustrated, satisfied, excited).
- **Pain Points:** Challenges or obstacles faced by the user.
- **Opportunities:** Ideas to improve the user experience.

	Record	Download to computer	Import to editing software	Edit the video	Export	Upload	Share
ACTIONS	Charge battery Buy blank tapes	Find cable Transfer to PC	Choose & install app Import footage	Add Crossfades, music Tinker for hours	Choose file format, codec Wait for export ... zzzz	Select hosting service Upload file	Send out chain mail Link to myspace, bebo, etc.
QUESTIONS	Do I have blank tapes? Batteries charged? Spare battery packed?	Why is it taking so long?	Which app is best? Is my PC compatible?		What's a CODEC? What settings are best?	Where can I put this file?	
HAPPY MOMENTS	Video quality is amazing! Love the long zoom				Labour of love - looks great		HOORAY, friends like it!
PAIN POINTS	So much preparation!	Can't find goddam cable! out of disk space. Huh?	Hard to pick the right app	Takes way too long	It came out all blocky! Too many decisions!	Youtube is 10 mins max	Doesn't play on mum's PC Too much work overall!
OPPORTUNITIES	Use Flash storage not tape Allow AA batteries	Build an integrated USB cable	Preload editing app free on camera	Streamlined editor - less control but quicker!	Video recorded as web ready Jargon free export options	Share as one click feature of editor Jargon free export options	Ensure a joined up "end to end" experience

Seniors Segment

The **Seniors Segment** is made up of 65+ year-olds. Many are retired, so have time to schedule check-ups during the day. The majority prefer to schedule their visits over the phone, talking to a scheduler in person. They will wait until their "regular" doctor is available, even when sick.

While this is changing, older seniors do not typically utilize their health records online, preferring to keep paper copies.

"When I call my doctor, I watch how quickly they answer the phone, how knowledgeable, professional and friendly the people were. If I see they weren't really interested in me and take the time to see that I'm satisfied, then I know it's time to choose another doctor."

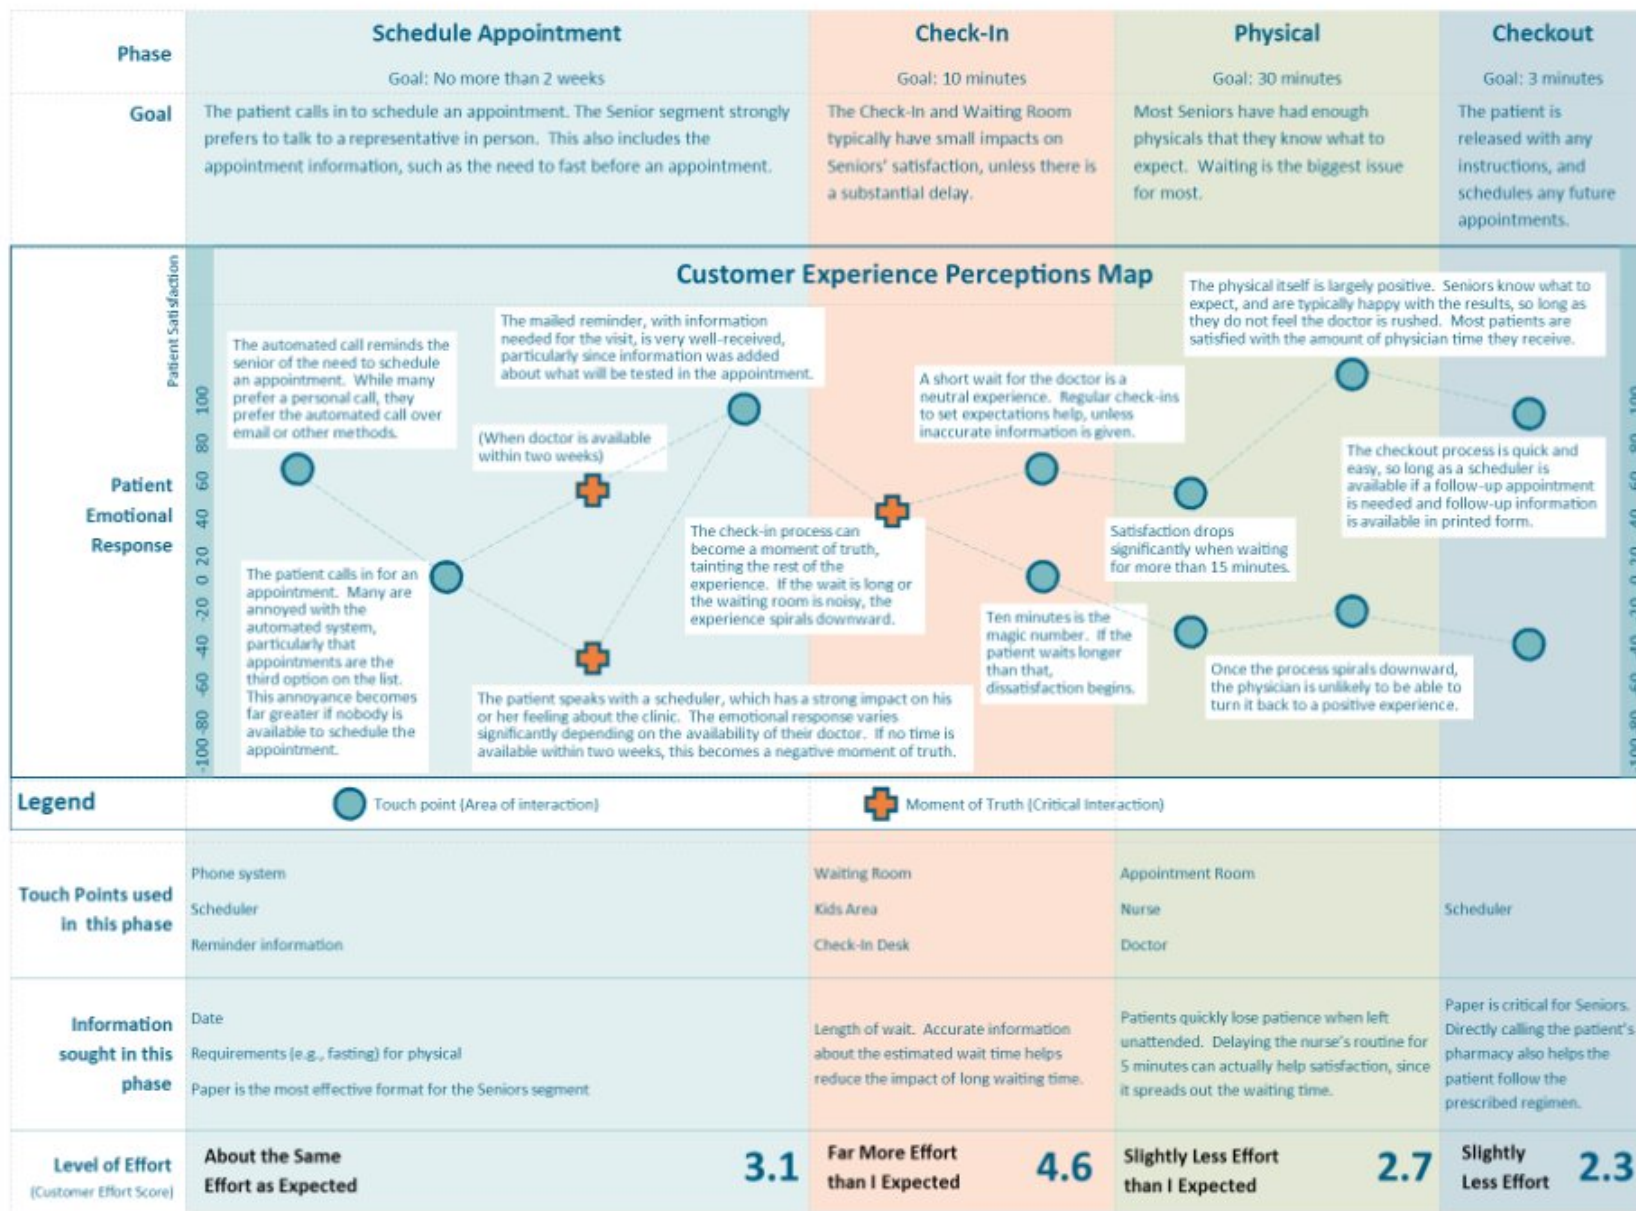

"I love my doctor! He always takes time to ask how I am doing, and gives me my paperwork before I go, so I can keep them in my file. My other doctor was in such a rush that I hardly got to see him."

Create your own Customer Experience Journey Map

Scheduling Physical Appointment (no blood work) Journey Map

User Journey Map (UJM) - Food Delivery

Stage	Awareness	Consideration	Ordering	Waiting for Delivery	Delivery and Receipt	Post Experience
User Actions	Thinks about ordering food instead of cooking	Opens the app, browses healthy food options, checks restaurant ratings & delivery time	Selects food, customises order (e.g., less oil, no spice), applies promo code, proceeds to payment	Tracks order in real-time, receives ETA updates	Receives food, checks packaging & temperature	Rates experience, shares feedback, might reorder
Thoughts & Feeling	"I need something healthy and fast."	"I want something nutritious and quick."	"I hope the food will be fresh and arrive on time."	"Hope my food arrives hot and on time!"	"Looks good, but did they follow my preferences?"	"That was convenient! Should I order again?"
Touch Points	Social media, word-of-mouth, ads, app notifications	Mobile app, restaurant filters, food descriptions, customer reviews	Order customisation, checkout, payment options, ETA estimate	Order tracking, push notifications, customer support	Delivery handoff, feedback option	App review prompt, loyalty rewards, referral codes
Pain or Gains	Too many options, unsure about healthy choices	"That was convenient! Should I order again?"	Checkout friction, missing payment options	Delivery delays, poor tracking updates	Incorrect items, packaging issues	No follow-up engagement, lack of incentives

Feature List

Describing the Usefulness

Feature List - That Facilitate JTBD (Usefulness)

A **Feature List** that facilitates a **Job To Be Done (JTBD)** outlines the functionalities or characteristics of a product/service designed to help users achieve their desired outcomes effectively. These features are intentionally crafted to address the user's goals, alleviate pain points, and deliver expected gains, ensuring the product's usefulness and relevance.

How Features Facilitate JTBD:

- **Alignment with Functional Goals:** Features provide the tools or processes to complete the task effectively.
- **Addressing Pain Points:** Features reduce or eliminate friction and challenges users face.
- **Enhancing Gains:** Features amplify the positive outcomes users expect from accomplishing their JTBD.
- **Ease of Use:** Features simplify complex processes, making the user experience seamless and intuitive.

Feature List - That Facilitate JTBD (Usefulness)

Example: Meal Delivery Service

JTBD:

"When I'm hungry and have no time to cook, I want a quick and reliable way to get a delicious and healthy meal so I can focus on my work without stress."

Feature List:

Feature	Usefulness (How it Facilitates JTBD)
Real-Time Order Tracking	Reduces anxiety by keeping the user informed about the delivery status and estimated time of arrival.
Dietary Preference Filters	Makes it easy for users to find meals tailored to their specific needs (e.g., vegan, keto, gluten-free), enhancing relevance.
Scheduled Delivery Option	Allows users to pre-plan their meals, addressing the need for convenience and reliability.
Customizable Meal Options	Enables users to adjust ingredients or portion sizes, ensuring their preferences are met.

Feature List - That Facilitate JTBD (Usefulness)

Continue.....Example: Meal Delivery Service

Feature	Usefulness (How it Facilitates JTBD)
Nutritional Information Display	Helps users make informed decisions, adding value for health-conscious individuals.
One-Tap Reorder	Saves time for regular users by enabling quick access to their favorite meals.
Loyalty Program	Provides rewards and incentives, enhancing user satisfaction and encouraging repeat usage.
24/7 Customer Support	Resolves issues like wrong deliveries or delays quickly, minimizing frustration.
Push Notifications	Keeps users informed about deals, discounts, or delivery updates, ensuring they feel engaged and valued.
In-App Feedback System	Allows users to share their experiences, ensuring continuous improvement and user trust.

Benefits of a Feature List Aligned with JTBD:

- **Higher Usability:** Users find the product intuitive and aligned with their needs.
- **Greater Adoption:** By addressing real user goals, the product becomes indispensable.
- **Enhanced Customer Satisfaction:** Minimising pains and maximising gains creates a loyal customer base.
- **Improved ROI:** Features aligned with JTBD reduce wasteful development of non-critical functions.

Visualising Your Product

Example: Visualising a Meal Delivery App

- **Organising the Content:** Information Architecture
- **Visualise Interaction:** Visualise the Interaction between users and products
- **Sketch:** A rough drawing of the app layout showing the home screen, meal options, and order summary.
- **Wireframe:** A grayscale structure displaying the menu, search bar, and filters without images or branding.
- **Mockup:** A fully designed screen with images of meals, color-coded categories (e.g., "Healthy," "Fast"), and branding elements.
- **Prototype:** A clickable version of the app allowing users to browse meals, add to cart, and simulate placing an order.
- **Storyboard:** Depicts a user deciding to order a healthy lunch, browsing options, placing an order, and receiving delivery, showcasing touch points.
